

REVOLUTIONIZING SPERM PREPARATION

ZyMöt™ Sperm Separation Devices: Delivering the highest sample quality, spin-free

A better way to prepare sperm

Quality, accuracy and efficiency are central to the success of a fertility practice. ZyMöt Sperm Separation Devices are a better way to prepare sperm. It's that simple.

The highest sample quality

FDA-cleared, CE-certified and available worldwide, ZyMöt devices efficiently isolate the healthiest, rapidly progressive sperm, to help achieve improved outcomes for IUI and ICSI procedures. No centrifugation is required.

With only **5 minutes of total hands-on tech time per sample**, every ZyMöt-processed specimen represents a significant time savings over traditional, centrifugation-based methods. ZyMöt Multi Sperm Separation Devices (850µL and 3mL) are suitable for use with a wide array of specimen types: normal samples, low motility, low concentration, low count and concentration, and viscous samples.

Fewer steps. More confidence.

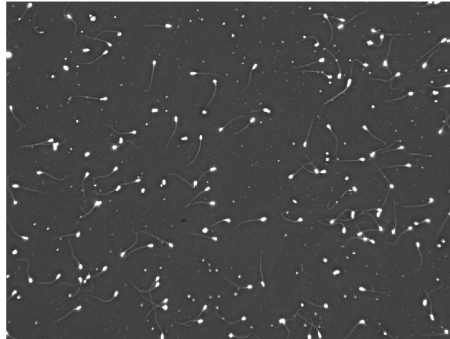

A shorter chain of custody – fewer movements per sample – means that ZyMöt devices help minimize mismatching risk, reducing the potential for costly error. **Processing sperm with ZyMöt devices gives providers more confidence and gives patients more peace of mind.**

Natural. Simple. Effective.

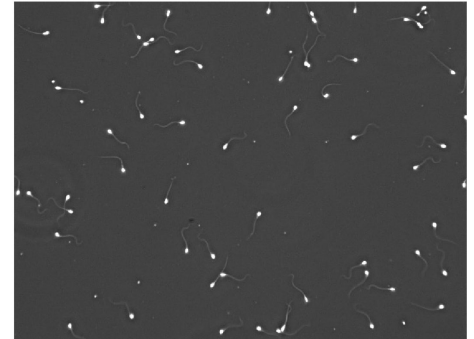

Try ZyMöt Sperm Separation Devices and realize immediate savings of time and resources, while providing premium quality sperm separation for your patients.
